

Toshiba IK-HD1

Configuration shown with Camera CCU, RCP panel & Interface box

Notes

1. This system is used for the Toshiba IK-HD1 with HD SDI video output
2. Data from the RCP panel is fed directly to the interface box or via the PTZF controller if other cameras are being controlled
3. The lens iris is controlled using the remote functions output on the interface box
4. This camera is controlled using the camera type – 'TU61/63' on the CCU panel
