Qx

Single Mode Fibre Modification

The Qx single mode fibre option allows efficient control & signal handling over greater distances, without the need for external converters. The option can also be retro-fitted to existing units.

Particularly useful for reality or sport broadcast applications when longer cable runs are required.

Technical Specifications

The Qx fibre option provides a robust means of passing SD/HD-SDI from the camera to the control position and an audio link for data in the reverse direction, plus genlock over two single mode LC fibres.

Sample Set Up

Qx fibre module can be integrated into existing Qx setups to extend the range beyong the limitations of copper cabling, now allowing for distances of up to 300m.
